SUMMARY

Backend engineer with 5+ years of experience building PHP and Symfony applications in SaaS and logistics. I like to take a feature from the first idea all the way to production. That means working out the scope with product managers, designing the backend and shipping it. I care about reliability, so a lot of my time goes into background jobs, slow queries and monitoring. I'm PSM II certified and comfortable leading technical discussions. I'm looking for a senior backend role where I own services and help other developers on the team.

SKILLS

- **Backend:** PHP 8, Symfony/Laravel, Python, Symfony Messenger, REST APIs, microservices
- **Data and messaging:** MySQL, PostgreSQL, RabbitMQ, Redis
- **Infrastructure:** Docker, Kubernetes, CircleCI, AWS (S3, Lambda), MinIO
- **Monitoring:** Grafana, Loki, Mimir, CloudWatch
- **Testing:** PHPUnit, Pest, Zenstruck Foundry
- **Frontend (working knowledge):** Vue.js, Inertia.js, Angular/TypeScript
- **Ways of working:** Scrum (PSM II), code review, Git

EXPERIENCE

Software Engineer at Awaretrain, Nijmegen

Sep 2023 – present · SaaS platform for security awareness training and phishing simulation, with customers across Europe

- Led epics from design to production, working out the scope with product managers and designing the backend.
- Improved retry handling for background jobs in Symfony Messenger, so jobs that will never succeed stop retrying. That cut false alerts and queue noise.
- Set up a Grafana and Loki dashboard so the Customer Success team can see errors and failed jobs.
- Found slow database queries and refactored them to cut response times.
- Build and maintain REST APIs, Doctrine migrations and RabbitMQ queues.
- Helped new developers get started when they joined the team.

Software Engineer at CEVA Logistics, Waalwijk

Jul 2021 – Jul 2023 · Global logistics company

- Developed new features and fixed bugs in PHP/Symfony on an existing high-volume logistics platform made up of several microservices.
- Sped up time-critical operations by rewriting slow SQL queries and fixing N+1 query problems.
- Worked closely with QA to catch edge cases before release. The team used Scrum and shipped to production often.

Backend Developer at GIMtransfer, Arnhem

Jan 2020 – Jan 2021

- Integrated third-party APIs and wrote Python scripts that connect Java-based services to internal databases.

Python Developer at DATABIZ SARL, Tunisia

Aug 2019 – Dec 2019

- Built web scrapers in Python with Scrapy, Selenium and BeautifulSoup, and maintained the databases for the scraped data.

Full Stack Web Developer at CIEG+, Tunisia

Jun 2016 – Jul 2019

- Developed and maintained PHP/Symfony web applications with MySQL and JavaScript, and helped plan and prototype new products.

EDUCATION

- **MSc Big Data Science**, Central University, Tunis · 2021
- **BSc Computer Science**, University of Tunis El Manar · 2011–2014
- **Professional Scrum Master II (PSM II)**, Scrum.org
